ABOUT SAMMI LINE BLIND

Sammi Machinery Co., Ltd. a LINE BLIND fabricator and machine shop, is a wholly owned subsidiary of line blocking technology and products.

Company Profile

- **Apr. 1993** Established
- **Sep. 2000** Quality Certification from KOREA Gas Safety Authority
- **Oct. 2002** Licensed new product of the Line Blind Valve
- **Nov. 2002** Licensed Utility Model of the Line Blind Valve
- **Aug. 2003** CE-PED approved from Bureau Veritas
- **Mar. 2005** Certificated "Venture Company" from KOREA government
- **May. 2007** ISO 9001 Approved
- **Aug. 2009** Fire Safety Test approved
- **Sep. 2009** CRN(Canada Registration Number) approved
- **Feb. 2010** API Spec. Q1 Certificate, ISO / TS 29001 approved
- **Dec. 2012** TSSA (Technical Standards & Safety Authority, Ontario) approved
- **Feb. 2013** RUSSIA GOST-R approved
- **May. 2013** RUSSIA ROSTECHNADZOR (RTN) approved
- **Jun. 2013** Canada ABSA (Pressure Equipment Safety Authority, Alberta) approved
- **July. 2013** API 6D approved
- **Aug. 2013** UAE TAKEER Qualified vendor approved
- **Dec. 2013** KSA SABIC Qualified Vendor approved
- **Apr. 2014** BRAZIL PETROBRAS Offshore Qualified Vendor approved
- **Jun. 2014** UAE Mott McDonald Limited Qualified Vendor approved
- **Oct. 2015** TR-CU 032 / 2013 approved
- **Oct. 2016** Cryogenic Test approved

Warranty

Sammi Machinery Co.,Ltd warrants 36 months after delivery provide that the product is installed properly according to vendor's user instruction, except for spare parts.

Assistance

Sammi Machinery Co.,Ltd may provide engineering and/or technical information to assist buyer in effecting field installation and/or field service.

And every request for adjustments and/or modifications will be responded with best regards.

WHAT IS LINE BLIND?

[Typical Process]

[SAMMI Process]

SAMMI LINE BLIND

Line blinding has been used to pipe lines in various industries wherever either positive shut-off is most concerned and full flow should be achieved without pressure drop.

In the past, Blinding (or blanking) a line was a costly labor-intensive process involving several personnel and equipment including cranes (depending on the size of the line) heavy tools, and occasionally scaffolding.

The lengthy process exposed operators to hazards including inhalation of potentially toxic fumes, spills of product and risk of explosion.

In addition to the handling of the heavy and unwieldy blind/spectacle blind flanges. The **SAMMI LINE BLIND** incorporates a tough and simple design that has been developed to provide absolute shut-off, long life and trouble-free service with minimum maintenance.

The unique and simple opening-closing mechanism of the **SAMMI LINE BLIND** allow one person to blank or blind pipelines with ease, rapidity and safety without any tools or equipment.

■ Absolute shutoff

Zero leakage to downstream

■ Quick change

Blinding by untrained operator within
30 seconds ~ 5 minutes safely

■ Only one operator

Blinding by one operator
pipeline with ease and safety

■ Friction-Free

Gear-set system provides perfect isolation
without any contacting or rubbing of gasket

■ Non line spread

No pipe stress during operation

■ Self sticking free mechanism

Unique Gear-set system prevents
sticking problem of blind plate

■ Cost saving

Not only Saving man-hour cost but
also increasing production time

■ No need tools

Hand-wheel operation.
No need any tools - Cranes, Bolts,
Nuts, Gaskets etc.

■ Safety working

Prevention of potential hazard
- Inhalation of potentially toxic fumes,
spills of product and risk of explosion

■ Simple structure

Minimum maintenance to replace
sealing only

COST EFFECTIVENESS

■ Necessary time for blinding or debinding

Size Ranged	Blank or Spectacle Plate(typical)	Sammi Line Blind	Saving Effect
1/2" ~ 14" (DN15~DN350)	 <p>1~4 Hours</p>  <p>2~4 man gasket, tools, lifter</p>	 <p>20sec to 2min</p>  <p>by 1 man</p>	<ul style="list-style-type: none"> - 2~16 man-hours - Gasket, bolts & nuts, tools - Time for draining and line cooling
16" ~ 48" (DN400~DN1200)	 <p>1~12 Hours</p>  <p>5~10 man with gasket, tools, lifter & Heavy equipment</p>	 <p>2min to 10min</p>  <p>by 1 man</p>	<ul style="list-style-type: none"> - 16~120 man-hours - Gasket, bolts & nuts, tools - Time for draining and line cooling

■ Increase productivity

Size	Blinding (typical)	Deblinding (typical)	More production
1/2" ~ 14"	1 to 4 hours	1 to 4 hours	2 to 8 hours
16" ~ 48"	4 to 12 hours	4 to 12 hours	8 to 24 hours

- Time saving for and draining and line cooling are not included
- Less pre-purge time
- Immediate work after stopping line

■ Saving cost for maintenance

- No consumable parts except gaskets
- No tools, wedges, crane, bolts are necessary
- Quick and Positive action in emergency
- Prevent vacuum losing
- Prevent contamination by mixing
- Prevent leaking accident in service
- Prevent environmental pollution

WHY CHOOSE SAMMI

Sammi Quick Line Blinds Offer a combination of two essential criteria

- Zero Leakage
- Safe & Easy blinding by untrained one operator

Features of SAMMI LINE BLIND

- **No line spread**
The unique & simple Gear-set mechanism makes a gap to switch blind plate without line spreading
- **Auto positioning of blind plate**
Blind plate is set on correct position by positioner
- **Hand wheel torque indicator**
Torque indicator provides correct positioning of tightening / untightening operation
- **Safety locking**
Locking devices with Pad Lock with key secure safety from incorrect operation by unauthorized operator
- **Self stick free mechanism**
Unique gear set mechanism shall free the blind plate from sticking problem
- **Gasket protection cover**
Blind cover protects blind plate from external damages
- **Double Sealing (optional)**
Depend on media and operating conditions, seal ring can be placed in double for safety
- **Open / Close position sensor (optional)**
Sensors can be installed to indicate blind plate position

APPLICATIONS / MEDIA

- Tankfarm
- FPSO
- Loading stations
- Ethylene furnaces
- COG (Coke Oven Gas)
/ BFG (Blast Furnace Gas)
- Mixing lines
- Fuel lines
- Shipboard lines
- Flares
- Clean out ports
- Tank vent
- Man ways
- Pump isolation
- LNG ships
- Product isolation
- Reactor blow down
- Filtration systems
- FSO
- Pig launching stations
- Steam lines
- Inert gas / Nitrogen gas
- Chemical cleaning isolation
- Lock out tag out systems
- Clean out ports
- Vessel inlets
- FCC unit

Naphtha, Diesel, Para-Xylene

Coke Oven Gas (AOV automation)

Natural Gas

Product carrier tank isolation

JET - Fuel (MOV automation)

Cryogenic service (LNG / Ethylene)

Tankfarm

Loading arm construction

Iron & Steel mill

VCM, RPG, Mix-Xylene

Chemical Terminal

Acetic acid, Methyl acetate

Ethylene, Propylene, SM

Regeneration gas

Gasoline and MTBE

Chemical Cleaning

Butadine

Heat exchanger - Bypass line

HDPE

PRODUCT LINE

SLIDING TYPE

One operator turns handwheel and unique gear-set mechanism makes a gap without pipe spreading.
By sliding blind plate manually, OPEN / CLOSE blind position is changed.
All blinding process completes within 3 minutes safely and easily.
Sturdy and simple design shall make high reliability with the most advanced technology and durability.

SWING TYPE

It take within 3 minutes for one operator to blank a line, operating the handwheel and rotating the blind into place without line spreading.
Again, all inline movement is internal, eliminating the potential for pipe-joint stress.
As one of the most popular model, quick operation with no line spread and correct spectacle positioner shall make easy and safe pipe line isolation.

COMPACT TYPE

The Compact type is designed for replacement of existing valves, limited F-F dimension or large diameter pipeline applications or limited space for installation.
It is designed with a short face to face, and has tapped bolt holes for easy installation between flanges.
The compact design also reduces weight and requirement for extra pipe support.

NON SPILL TYPE

The body is completely enclosed to prevent spills and reduce emissions during operation.
The compact design incorporates tapped bolt holes for ease of installation.
Process involves operating the handwheel to free the blind, which is then removed and replaced in the blanking position.
The blind is then secured by once more operating the handwheel.

JACK BOLT

The traditional style of line blind offers a broad range of pressures and a lower cost.
The basic standard for line blinding for many years.

GOGGLE TYPE

Goggle type of Line Blind is positive solution for large diameter, high temperature and toxic gas condition for maintenance and inspection

AUTOMATED LINE BLIND

Automated Line Blinds are used for remote control operation, frequency cycle, or critical fluid application. Sammi provides automated system by AOV, MOV or oil hydraulic source.

SLURRY / POLYMER

Sammi Slurry / Polymer type offers 100% isolation for severe service applications with various types of chemicals that is very thick and viscous fluids and solid. Dual Gear-set actuators allows no friction during operation and soft seal (Elastomer o-ring) guarantees perfect isolation. Specially designed scraper system removes fluids built on blind plate.

RFCC

Sammi supplies high quality "Perfect isolation RFCC Type " design with compact enclosed body and stellite metal seating. Gear-set system provides making a gap and single blind plate slides along guide plates that prevents deposition of coke/solid particles on blind disc and jamming.

SLIDING TYPE

COMPACT TYPE

NON-SPILL TYPE

TECHNICAL SPECIFICATIONS

NOMINAL DIAMETER

NPS 1/2 (DN15) - NPS100 (DN2500)

TEMPERATURE RANGE

Standard Design : -20°C ~ +200°C
 High Temp. Design : +200°C ~ +816°C
 Cryogenic Design : -196°C

PRESSURE RATING

ASME Class 150 to Class 1500
 Other pressure classes up to ASME 2500
 # available upon request

MATERIALS

BODY : Carbon Steel, Stainless Steel, Special Material (Duplex, Hastelloy, Monel, Inconel etc.)
 BLIND : Stainless Steel, Special Material (Duplex, Hastelloy, Monel, Inconel etc.)
 MOVING PARTS & SEALING SURFACE are Anti-corrosion Materials

FUNCTION

Gas & Liquid Perfect Isolation(Zero Leakage)

OPERATION METHOD

Manual Operation
 Electric, Pneumatic or Hydraulic Operation

APPLICATIONS

• REFINERY

- > Ethylene Furnace
- > Decoking line
- > Steam & Vapor line
- > FCCU Fractionator isolation (overhead & bottom line)
- > Catalyst service
- > Flare gas line

• CHEMICAL PLANT

- > Reactor Blowdown
- > Chemical Cleaning isolation
- > Mixing lines
- > Regeneration gas line
- > Filtration system
- > Loading station
- > Transfer line

• OFFSHORE

- > FPSO
- > LNG ship
- > Shipboard lines
- > Vessel inlet
- > Inert Gas system

• STEEL

- > Coke Oven Gas
- > Blast Furnace Gas

PARTS DESCRIPTION

Compact Type

NON SPILL TYPE

GENERAL INFORMATION

INSTRUCTION & FEATURES

Non spill type of Line Blind has good advantages in Oil terminal & offshore applications where is limited installation space and marine pollution is strictly prohibited.
 The 3 sides covered body & compact design prevents ground pollution and it allows to install at parallel pipe lines.

Flange
- API 598 : Valve Inspection and Test
- API 607 : Fire Test for Soft - Seated Quarter Turn
Valves.
- API 590 : Steel Line Blanks

MSS Standard

- SP - 6 : Finish for contact faces of pipe flanges
and connecting end flanges of valves and fittings
- SP - 25 : Marking system for valves, fitting,
flanges and unions.
- SP - 55 : Quality standard for steel castings for
valves, flanges and fitting and other piping
components (visual method)

Pressure Test (ASTM F1020, API 598)

Class	Seat & Shell
150	23kg/cm ² (325psi)
300	58kg/cm ² (825psi)
600	116kg/cm ² (1,650psi)
900	172kg/cm ² (2,450psi)
1500	288kg/cm ² (4,100psi)

F.E Analysis

Sliding type, NPS 28, ASME 900 lbs, Stainless Steel 304
valve, part coupled thermal - structural F.E Analysis
(ANSYS 17.2)

Coupled Analysis

Stress Distribution

Overall stress distribution is the same as each other
(inside pressure 166bar)

MANUFACTURING & CERTIFICATE

Leakage trouble with general valves may cause big losses of industrial management as contamination of fluid mixing, personnel accident by inhalation of toxic gases or unexpected explosion that leads to occasionally huge disaster.

SAMMI quick blinding products give the best solution for safety management of pipelines.

Fire Safety Test (API 607)

Fire Safety Test

Cryogenic Test (-196°C)

Impact Test (ASTM A370-12)

Xylan Coating

PTFE Lining

Metal Spray

Weld Built up

Weld Built up (ASME Sec. IX)

Pressure Test (API 598)

Class 5500 Pressure test

Surface Roughness Inspection
(ASME Sec. V Art.5)

Material

Carbon Steel, Stainless Steel, Duplex, Hastelloy, Alloys and other special materials are available

PMI (ASME Sec. II Part A,B,C)

NDE (UT)

Bend Test (ASTM E190)

Tensile Test

Dry Film Thickness Inspection
(ISO 19840)

Holiday detection (NACE RP 0188)

CE-PED Module H.

- Pressure Equipment
- Approved from Bureau Veritas

ISO 9001

- Quality Management System
- Approved from Bureau Veritas

Fire Safety Test

- Fire Safe design
- Approved from Velosi

API Spec. Q1

- Quality Management system
- Approved from API

TSSA

- Boilers & Pressure Vessels
- Approved from TSSA
(full name CANADA)

ABSA

- Boilers & Pressure Vessels
- Approved from ABSA
(full name CANADA)

RCU 032/2013

- On safety of equipment for high pressure
- EAEC (Eurasian Economy Community)

API 6D

- Specification for pipeline valves
- Approved from API

Sammi knows positive pipeline isolation

First in the world, SAMMI developed various kinds of innovative Non-line spreading type LINE BLIND. SAMMI provides high quality products with the most advanced design and technology fulfill actual site conditions and fluids

The best solution for positive isolation
